

# Plant Classification Journal

Students need at least four paper bags.

1. Alternate the direction of the top bag, so that its bottom is on top of all the other bags, but next to their bottoms, stacked on top of each other.
2. Holding the one side of the bags, fold over approximately 1/2" and punch two holes on the fold. Use brads to hold the bags together.
3. The pockets created can be used to store plant samples. The pages that the sacks create are used to write information.
4. The writing should list the characteristics of the plant that is in the pocket. It can also list other data, questions or vocabulary.
