

# Create Your Own Picture Graph Worksheet

Use the graph to make up your own problems. Think: what will you count? Where will you look?

The image displays three identical blank picture graph templates arranged horizontally. Each template consists of a vertical column of 12 rectangular boxes. Below the column of boxes is a single, larger rectangular box. Underneath this larger box are three horizontal lines: a solid top line, a dashed middle line, and a solid bottom line. These lines are intended for students to write their own math problems and labels for the graph.
