

Vocabulary Match

<p>Arching landform created by weathering and erosion.</p>	<p>To carry away, to wear away. Removal of rocks and dirt by wind, water and ice.</p>	<p>The process of breaking down rock and other materials into smaller pieces. Weathering breaks it down. Erosion carries it away.</p>
<p>Upward movement of Earth's crust.</p>	<p>Shaking or trembling of the earth caused by movement along a fault.</p>	<p>Vents in Earth's crust that lava and steam can travel through.</p>
<p>Slow-moving masses of snow and ice that carry rock and dirt.</p>	<p>A flood caused by heavy or excessive rainfall in a short period of time, generally less than 6 hours. A flash flood rises rapidly, often with little or no warning.</p>	<p>A fall or slide of a large mass, as of snow or rock, down a mountainside.</p>

<p>To wear away.</p>	<p>A slide of a large mass of dirt and rock down a mountain or cliff.</p>	<p>A steep, flat-topped hill created by erosion.</p>
<p>A break or fracture in the crust of Earth.</p>	<p>Having to do with geology, the study of Earth.</p>	<p>The wearing away of soil and other sediments by winds that remove soil from one point on the Earth's surface and deposit it elsewhere.</p>
<p>The carrying away of soil and sediments by water that remove sediments from one point to another.</p>	<p>The process of layering sediments.</p>	<p>Chemical reactions break down the bonds holding the rocks together, causing them to fall apart, and form smaller and smaller pieces.</p>

Arch	Erosion	Weathering
Uplift	Earthquake	Volcano
Glacier	Flash Flood	Avalanche

Erode	Butte	Chemical Weathering
Fault	Wind Erosion	Deposition
Water Erosion	Geological	Landslide
