| Word | Examples | Attributes <br> And Parts |
| :---: | :---: | :---: |
| Face |  |  |
| Edge |  |  |
| Vertex |  |  |
| Base |  |  |
| Right Rectangular |  |  |
| Prism |  |  |$\quad$| Triangular Prism |
| :--- |
| Surface Area |

|  | is always measured |
| :--- | :--- |
| using a distance unit. Finding |  |
| perimeter means finding the |  |
| distance around rim of the |  |
| shape. Some of the units for |  |
| measuring the perimeter are: |  |
| centimeter | cm |
| inch | ----- |
| foot | ----- |
| kilometer | ----- |
| Mile | --- |
|  |  |

Use your ruler to
sketch a centimeter.
Use your ruler to sketch an inch.

What is the perimeter for each?

-_-_is always measured using a square distance unit. Finding area means finding the number of squares needed to cover a shape. Some of the units for measuring the area are:

| Square centimeter | $-\mathrm{cm}^{2}$ |
| :--- | :--- |
| Square inch | ----- |
| Square foot | ---- |
| Square kilometer | ----- |
| Square Mile | ---- |

$\qquad$ is always measured using a cubed distance unit. Finding volume means finding the number of cubes needed to fill up an object. Some of the units for measuring the volume are:
Cubic centimeter _ $\mathrm{cm}^{3}$
Cubic inch
Cubic foot
Cubic kilometer
$\qquad$
Cubic Mile $\qquad$

Count the number of cubic units to find the volume for this prism.

Build or sketch a 4 by 4 cube and count the cubic units needed for volume.

Units of Measure For Geometric Dhjects
