Date $\qquad$

For each unit of measure in the table below, give another real world example.

| Type of measure | Unit and symbol | METRIC <br> Relation to Common Objects or Events | Another Real World examples: |
| :---: | :---: | :---: | :---: |
| Distance Length; <br> Move across it | Centimeter cm <br> (0.01 meters) | 1. A paper clip is about 1 centimeter wide and 3 centimeters long <br> 2. An unsharpened pencil is about 20 centimeters long |  |
|  | Meter <br> m <br> 100 centimeters | 1. A full-size automobile is about two meters wide. <br> 2. Most classroom doors are about one meter wide. |  |
|  | kilometer km <br> (1,000 meters) | 1. 100 telephone poles end to end would extend about a kilometer. <br> 2. A kilometer is a little more than half a mile. |  |
| Weight <br> Pick it up | Gram gm | 1. Two small paper clips weighs about a gram <br> 2. A nickel or a marble weighs about 5 grams |  |
|  | Kilogram km (1,000 grams $)$ | 1. The average weight of a newborn baby is 3-4 kilograms <br> 2. A pair of men's shoes weighs about one kilogram. |  |
| Volume/ Capacity <br> Fill it up | Liter L | 1. Four average glasses hold about 1 liter of liquid. <br> 2. The gas tank of a full-size automobile holds about 90 liters. |  |
| Temp <br> Warm it up | Degrees Celsius C | 1. Water freezes at $0^{\circ}$ <br> 2. A comfortable room is about $21^{\circ}$ |  |

| Type of Measure | Unit and symbol | Customary <br> Relation to Common <br> or Events Objects | Another Real World Examples |
| :---: | :---: | :---: | :---: |
| Distance <br> Length; <br> Move <br> across it | $\begin{aligned} & \text { Inch } \\ & \text { in or " } \end{aligned}$ | 1. A quarter is about an inch across the middle (diameter). <br> 2. A graphing calculator is about 7 ". |  |
|  | Foot ft or (12 in) | 1. A ruler is one foot long <br> 2. A Math book is about a foot from top to bottom. |  |
|  | Yard yd (3 ft) | 1. From nose to tip of fingers on the outstretched arm of an average man is about a yd. <br> 2. The marked yard lines on a football field are 10 yards apart |  |
|  | Mile <br> mi (5,280 ft.) | 1. If walking briskly, an adult can walk a mile in 20 minutes. <br> 2. A mile is about a hundred football fields from goal post to goal post. |  |
| Weight Pick it up | Ounce oz | 1. An average sized Snicker candy bar weighs about 5 ounces. <br> 2. A 50 cent piece weighs about half an oz. |  |
|  | Pound lb (16 oz) | 1. Two large apples weigh about a pound. <br> 2. An average newborn baby weighs between 7 and 8 pounds. |  |
|  | $\begin{aligned} & \text { Ton } \\ & \text { T } \end{aligned}$ | 1. 10 average men weigh about a Ton. <br> 2. A small car weighs about a Ton. |  |
| Volume/ Capacity Fill it up | Ounce oz | 1. A soda can holds 12 oz . <br> 2. Your mouth can hold about 2 ounces. |  |
|  | Quart qt. (32 oz) | 1. A large drink at a convenience store holds about a quart. <br> 2. An average pitcher holds 2 quarts. |  |
|  | Gallon gal (4 quarts) | 1. A gallon of chocolate milk serves about 12 people. <br> 2. An average home fish tank holds about 20 gallons of water. |  |
| Temp <br> Warm it up | Degrees Fahrenheit F | 1. Water freezes at $32^{\circ}$. <br> 2. A comfortable room is about $72^{\circ}$. |  |
