Finding Equivalent Rational Number Forms-Procedures
(Tune: If You=re Happy And You Know It Clap Your Hands.
## Lyrics by Linda Bolin)

First you find the decimal form. That is the rule.
If you find the decimal first, then you=re no fool.
If a fraction's what you see,
Or percent is what it be,
Find the decimal form, and then you will be cool.

A percent can change to decimal very fast
Find the decimal. If there's none, you place it last.
Move that decimal left you know,
Past two places you must go.
Your percent is now in decimal form at last.

A fraction can become a decimal too.
Take the denominator and divide into
The numerator (that's the top).
Find the quotient, and then stop.
'Cause the decimal form has just appeared for you.

So, find the decimal first. That is the rule.
If, you find the decimal first, then you=re no fool.
If a fraction's what you see,
Or percent is what it be,
Find the decimal form, and then you will be cool.
