## How Many Ways Can You Display?

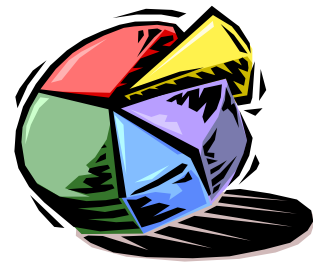

(Tune: This Is The Way We... Wash Our Hair, etc.)

Oh, how many ways can you display  
Or represent data? How many ways?  
How many ways? I'll name a few.  
Describe or tell what these displays can do.

There's bar or pictograph, circle graph too.  
Comparing categories is what these graphs do.  
Histogram intervals, look like a bar.  
Line graphs can show you how long or how far.

Don't forget plots? We need them too.  
They make analyzing much simpler to do.  
To find the range, median, mode or mean  
Plots really make these more easily seen.

There are scatter plot quadrants with points  
Stem and leaf plots with leaves on a stem.  
Line plots have exes stacked on number lines,  
And box plots have whiskers that look really fine!

So, how many ways can you display  
Or represent data? How many ways?  
How many ways? We've named a few  
To help you make data delightful to view.
