## Measurement Problem Solving Cards Answer Sheet

Use the following chart to solve problems with capacity measurement.

| The equivalence card:                          | Answer the card: | Is there another answer? |
|--|------------------|--------------------------|
| 4 cups = ?                                     |                  |                          |
| 4 cups + 1 quart = ?                           |                  |                          |
| 2 cups + 3 ½ quarts = ?                        |                  |                          |
| 3 cups + 1 cup = ?                             |                  |                          |
| 4 cups + 2 quarts = ?                          |                  |                          |
| 2 cups + 6 cups = ?                            |                  |                          |
| <sup>1</sup> / <sub>2</sub> quart + 2 cups = ? |                  |                          |
| 8 cups + 1 quart = ?                           |                  |                          |
| $\frac{1}{2}$ cup + 3 $\frac{1}{2}$ cups = ?   |                  |                          |
| 1 quart - 1 cup = ?                            |                  |                          |
| 2 quarts - 4 cups = ?                          |                  |                          |
| 8 cups - 1 quart = ?                           |                  |                          |
| 16 cups - 1 quart = ?                          |                  |                          |
| 3 quarts - 4 cups = ?                          |                  |                          |
| 4 quarts - 8 cups = ?                          |                  |                          |
