

## RISK AND OUTCOME ACTIVITY

Instructions: Place these labels on baskets, boxes, cups, or levels of a dart board. Using tape, create five different distances away from the labeled items. The closest distance label, “Ultraconservative”, the next distance “Conservative”, next “Moderate”, next “Risky”, and finally “Speculative Risk”. Have the students make a goal of what they will get prior to them throwing the ball or dart. After they throw the ball or dart, discuss what their goal was and the risk associated with it. Did the end result benefit them? Was it worth the “risk” or would it have been better for them to choose a more conservative level of risk and throw from that distance?
