

VOCABULARY FEMALE REPRODUCTION STUDENT WORKSHEET (Supplementary)

1. Corpus Luteum:

2. D&C:

3. Dysmenorrhea:

4. Endometriosis:

5. Follicle-Stimulating Hormone (FSH):

6. Hymen:

7. Hysterectomy:

8. Labia majora:

9. Labia minora:

10. Luteinizing Hormone (LH):

11. Menopause:

12. Orgasm

13. PMS:

14. Toxic Shock Syndrome:

15. Tubal ligation:

16. Vulva (VULL-vah)

VOCABULARY FEMALE REPRODUCTION TEACHER KEY (Supplementary)

1. **Corpus Luteum:** the yellow, glandular body that is formed in the ovary from the follicular remains.
2. **D&C:** dilation and curettage, a common minor operation on women.
3. **Dysmenorrhea:** painful menstruation.
4. **Endometriosis:** fragments of the endometrium in abnormal places.
5. **Follicle-Stimulating Hormone (FSH):** a substance which brings to life a few of the ovum in one of the ovaries.
6. **Hymen:** a narrow fold of tissue encircling the entrance to the vagina.
7. **Hysterectomy:** surgical removal of uterus.
8. **Labia majora:** two folds of skin running from the mons pubis to below the vaginal opening.
9. **Labia minora:** two smaller folds of tissue which lie just within the labia majora.
10. **Luteinizing Hormone (LH):** causes the follicle to burst, and allows ovum to fall into the opening of the fallopian tube.
11. **Menopause:** the remaining ova no longer ripen or develop.
12. **Orgasm:** characterized by the massive release of muscle tension which has built up during excitement.
13. **PMS:** Premenstrual Syndrome.
14. **Toxic Shock Syndrome:** caused by bacteria that live in the vagina, which then multiply and causes infection.
15. **Tubal ligation:** an operation for sterilization of women.
16. **Vulva (VULL-vah):** woman's external genital area.
