

## **Protein Synthesis Models**

In 15 minutes, using all the supplies in your bag and utilizing every person in your group, develop a silent, working model of protein synthesis. This should be as accurate as possible. You may also use the chairs and the desks in the room as props if you find them necessary. You will be graded on the creativity and accuracy of your model. You will also be graded on the use of all group members. Your group must demonstrate your working model for the class.

Creativity 15 points

Accuracy 15 points
