Instructional Procedures

Step 1

Use the ball to teach students principles of first aid and cardiopulmonary resuscitation. Toss the ball from one student to another. Have them read and try to answer the question underneath or closest to their left thumb. Each problem is numbered and enclosed in its own space. Answers are provided in the insert sent with the ball. Feel free to discuss myths or issues surrounding the different questions as they come up. There are 100 questions printed on the ball.

Step 2

There are other suggested methods of play included in the insert or make up your own way to play.
