

Wonderful Water

Summary

In this activity students will be introduced to some of the important properties of water and some of the key vocabulary associated with water. This can be a group or an individual activity.

Time Frame

1 class periods of 60 minutes each

Group Size

Small Groups

Instructional Procedures

Write the following words on the board: solvent, solute, adhesion, density, cohesion, polarity.

Have the students fill them in the center of the boxes on their student sheets.

Give students time to research the meaning of each word and fill in the charts.

Handout the reading selection and explain to student that they need to fill in the missing words from the vocabulary words they just defined.

Definitions:

1. Polarity:
a molecule with a positively charged portion and a negatively charged portion, overall the molecule is still neutral
2. adhesion
is attraction between molecules that are different,
3. cohesion
is the attraction between molecules that are the same.
4. density
is the amount of matter in a given amount of space
5. solvent
-a substance in which other substances dissolve
6. solute
-a substance that dissolves in another substance.
