Create Educational Games Internet Resources

Rob Bentley
rob@uen.org

Multimedia Fusion 2.0 can enable you to design and create your own educational programs and computer games. This powerful program allows you to assemble graphics, animation, sound, and interactivity to produce educational applications for your students. Students can also create their own games and simulations.

The beauty of Multimedia Fusion is that the entire interface is very visual. Anyone, including those who are “math-challenged,” can create their own computer games.

Multimedia Fusion 2.0 resources:

<http://www.clickteam.com/>

This is the company that created and sells Multimedia Fusion 2.0 and other game creation products. Download the demo version, ask questions in the forum, download add-ons, tutorials, and samples.
