

Build a function that models a relationship between two quantities. Develop models for more complex or sophisticated situations (F.BF.1)	
<p><b>Standard III.F.BF.1:</b> Write a function that describes a relationship between two quantities.☐</p> <p><b>b.</b> Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.</p>	
Concepts and Skills to Master	
<ul style="list-style-type: none"> <li>Combine functions using addition, subtraction, multiplication, or division. Use functions from Secondary I, Secondary II, and Secondary III.</li> </ul>

Build new functions from existing functions (F.BF.3-4)	
<p><b>Standard III.F.BF.3:</b> Identify the effect on the graph of replacing <math>f(x)</math> by <math>f(x) + k</math>, <math>kf(x)</math>, <math>f(kx)</math>, and <math>f(x+k)</math> for specific values of <math>k</math> (both positive and negative); find the value of <math>k</math> given the graphs. Note the effect of multiple transformations on a single function and the common effect of each transformation across function types. Include functions defined only by a graph. Experiment with cases and illustrate an explanation of the effects on the graph using technology. <i>Include recognizing even and odd functions from their graphs and algebraic expressions for them.</i></p>	
Concepts and Skills to Master	
<ul style="list-style-type: none"> <li>Describe verbally and graphically what will happen when <math>f(x)</math> is replaced by <math>f(x) + k</math>, <math>kf(x)</math>, <math>f(kx)</math>, and <math>f(x+k)</math>, where <math>k</math> is any real number. Use all functions studied in Secondary I, Secondary II, and Secondary III.</li> <li>Perform transformations (including multiple transformations) on any function with and without technology.</li> <li>Recognize even and odd functions from their graphs and algebraic expressions.</li> <li>Given a graph of <math>f(x)</math> and <math>f(x) + k</math>, <math>kf(x)</math>, <math>f(kx)</math>, or <math>f(x+k)</math>, on the same coordinate axis, find the value of <math>k</math>.</li> </ul>
