# Introduction to Accounting OER Conversion

ACCT 2010 is a gateway course to the accounting program at UT with 10-15 sections and hundreds of students every year. The standard course materials were an inclusive access costing each student around \$100. Our university has been encouraging the use of OER and we decided to begin the project of converting all sections to OER.

The team of three faculty members began working with the UT Library, who runs the OER program on our campus, back in Fall 2022. The next year was spent reviewing OER texts and analyzing how well they fit the current course topics and course learning outcomes. Ultimately, the OpenStax *Principles of Accounting Volume 1: Financial Accounting* was selected, and a pilot course was redesigned. One section is currently being piloted this spring semester.

Plans include assessing the pilot course running this semester, make any appropriate changes necessary, convert all sections of ACCT 2010 to OER., and then start the process with the next accounting course.
