Measuring Dry Ingredients

Suppose you have to measure a dry ingredient, such as granulated sugar, rice, or corn meal. If you follow the steps below, you'll get the *exact* amount your recipe calls for.

1. Set up the measuring cup.

Put the measuring cup in a dish. Why do you think you do that?

2. Fill the measuring cup.

Fill the cup with the dry ingredient. Pile it up *past* the top of the cup. Why do you think you do that?

3. Level off the ingredient.

Get a utensil that has a straight edge, such as a spatula. Level off the ingredient like this: Scrape the edge across the top of the cup. Now the measuring cup will have the exact amount. What other utensils could you use to level off ingredients?

Bonus: Practice measuring a real ingredient. Use all the measuring cups in a set.

Measuring Dry Ingredients

Suppose you have to measure a dry ingredient, such as granulated sugar, rice, or corn meal. If you follow the steps below, you'll get the *exact* amount your recipe calls for.

1. Set up the measuring cup.

Put the measuring cup in a dish. Why do you think you do that?

Some of the ingredients may spill over the top

2. Fill the measuring cup.

Fill the cup with the dry ingredient. Pile it up *past* the top of the cup. Why do you think you do that?

To make sure you have enough

3. Level off the ingredient.

Get a utensil that has a straight edge, such as a spatula. Level off the ingredient like this: Scrape the edge across the top of the cup. Now the measuring cup will have the exact amount. What other utensils could you use to level off ingredients?

Table knife, chopsticks etc.

Bonus: Practice measuring a real ingredient. Use all the measuring cups in a set.

Measuring Brown Sugar

Some ingredients don't fill up cups well. So you must *pack* them into cups when you measure them. Brown sugar is an example. Here's how to measure it.

1. Fill the measuring cup.

Place the dry measuring cup on a plate. Use a spoon to put the brown sugar in the cup. Why do you put the cup on a plate?

2. Pack the brown sugar.

Use the spoon to press the sugar down hard. Fill the cup past the top. What happens when you press the sugar down hard?

3. Level off the brown sugar.

Get a utensil that has a straight edge, such as a spatula. Level off the brown sugar. What other utensils could you use to level it off?

Here's how to tell if you packed the brown sugar correctly. Carefully turn the measuring cup upside down onto the plate. Lift the cup so that the sugar slides out. The brown sugar should stay in the shape of the cup. If the brown sugar falls apart, what does that tell you?
