Measuring Liquids

Follow these steps when you measure liquids. You'll get the right amounts. And you won't spill anything.

1. Set up the liquid measuring cup.

Put the measuring cup on a flat, even surface. What would you put it on in your kitchen?

2. Pour the liquid.

Carefully pour the liquid into the cup. Pour slowly. When the liquid reaches the right marker line, stop pouring. What could happen if you pour too quickly?

3. Check your measurement.

Bend down so that your eyes are level with the marker line. Look at the top of the liquid. What tells you that you have the right amount?
