

COLORS OF NATURE

The Language of Colors in Nature

Prepared for :
3rd Grade Teachers
in the state of Utah

Artes de Mexico en Utah

We hope to increase cultural understanding and foster deeper appreciation of the main agricultural corps, traditions and knowledge of various Native American groups.

Born from Corn Lessons - 3rd Grade

1) Born from Corn

Standard II: Students will understand cultural factors that shape a community.

Objective 1: Evaluate key factors that determine how a community develops.

B. Describe how stories, folktales, music, and artistic creations serve as expressions of culture.

This lesson will introduce; corn as the source of life and existence for the indigenous peoples of the Americas (specifically the Maya), practices that are still present today, and the important connection between culture, nature and sustainability.

2) Colors of Nature

Standard II: Students will understand cultural factors that shape a community.

Objective 2: Explain how selected indigenous cultures of the Americas have changed over time.

B. Identify how indigenous people maintain cultural traditions today.

The second lesson will discuss color from an Indigenous perspective (specifically the Maya). This includes literature, symbolism, murals, and estella paintings. The lesson explores colors and their appearance in the Popol Vuh and the modern day process of natural pigments and dyes.

3) Food, Land, Power

Standard II: Students will understand cultural factors that shape a community.

Objective 1: Evaluate key factors that determine how a community develops.

D. Identify and explain the interrelationship of the environment (location, natural resources, and climate) and community development (e.g. food, shelter, clothing, industries, markets, recreation, and artistic creations).

This lesson explores foods that are native to the American continent, the ways food migrates from one place to another, and how the Maya grow crops through a sustainable agricultural system called "La Milpa". There is also a focus on the relationship between food and social justice for Indigenous peoples and how migration changes accessibility to ancestral foods.

Project Description

Throughout Utah, the U.S. and indeed the Americas, clashes are occurring between Native American communities and overall communities. Much is based on a fundamental lack of understanding of differences in history, religion, world views, and philosophies. A core difference is often basic beliefs as to our human relationship to nature. Indigenous perspectives have not been a central part of the educational system in the United States.

This lesson will introduce educators to the importance and relationship between culture, nature and sustainability, introducing corn as the source of life and existence for the Indigenous peoples of the Americas, which practices are still present today.

Because there is so much misinformation about Indigenous peoples and cultures shown in popular media and even textbooks, *Colors of Nature: The Language of Color in Nature*, seeks to share the meaning and cultural importance from the indigenous perspective of the Maya weavers in our community with our entire community.

Born from Corn

More About the Slides

• Maya vs. Mayan

The term "Mayan" is only used by scholars when referring to the languages spoken by the Maya. There are many Maya languages and many Maya peoples. The term "Maya" is used when referring to people, places, and culture, without distinction between singular or plural.

Example: "It was written in a Mayan language." "The Maya harvest corn."

The Term "Mayan & Indio"

Slide 4

The term "Mayan" is only used by scholars when referring to the Maya languages. There are many Maya languages and many Maya peoples. The term "Maya" is used when referring to people, places, and culture, without distinction between singular or plural.

Example: "It was written in a Mayan language."

The term "Indio or Indian" has a negative connotation in Latin America. This map was created by Aaron Carapella and it shows the actual names of Indigenous peoples by Indigenous peoples.

More about the Maps: <https://www.tribalnationsmaps.com/>

Vocabulary

• Weaving

The craft or action of forming fabric by interlacing threads.

• Backstrap Loom Weaving

a horizontal loom on which one of two beams holding the warp yarn is attached to a strap that passes across the weaver's back.

A family tradition that has been passed down for generations, usually from the parent to their children.

Backstrap Loom Weaving

Slide 6

Backstrap loom weaving is an example of a tradition that has been passed onto many generations for at least four thousand years (2000 B.C.). Usually from mother to daughter, but those limitations are changing. Weaving is now slowly becoming a non-gender specific practice. You can search the story of Alberto Gómez López as an example. You can watch or show this video to see the loom in action. (Video is included in the Slide Deck Presentation)

Born from Corn

More About the Slides

• Sustainability

Avoidance of the loss of natural resources in order to maintain an ecological balance.

Trying not to overuse or pollute natural resources like water, forests, oil, stones, air, etc. to keep a natural balance in nature.

Sustainability and the Cosmovision

Slide 9

Because of Maya cosmovision, taking care of the environment has a direct connection with taking care of one self. It is not a religion, it is a way of life, to see the world, the cosmos, and nature as an extension of ourselves. Sustainability is the outcome of a cosmovision worldview..

SEE, THINK, WONDER

Slide 13

To learn more about this strategy visit:

<https://www.facinghistory.org/resource-library/teaching-strategies/see-think-wonder>

invite students to articulate what they are thinking with the evidence from the picture

The images above depict the process of dye-ing threads by present day Maya weavers.

Teachers can ask students:

- What do they SEE happening in these images?
- What colors do you see?
- What do you THINK they are making?
- What do you wonder?

Born from Corn

More About the Slides

Natural Dyes

The Maya have their own process of dyeing yarn and cloths and have shared it for many generations. Weaving, dyeing yarn and wearing traditional clothing are symbols of survival, resistance and continuation.

A collage of four images: top-left shows a person in a yellow shirt working at a table; top-right shows a close-up of dyed fabric; bottom-left shows a person's hands working with colorful dyes; bottom-right shows a person in a yellow shirt holding a tray of colorful dye samples.

Sharing in Our Community

Slide 14

Maya Tselal sisters Maria Elena and Chepita teach little ones how to create dyes for their threads by using elements in nature and the environment. They share their knowledge about weaving and embroidery with their children and grandchildren and expand those practices with our community in Utah.

An illustration of two figures, the Hero Twins, standing on a colorful path. They are wearing traditional Maya clothing and have large, ornate headdresses. The path they stand on is divided into four colored sections: red, yellow, green, and black.

Creations Stories from the Popol Vuh

Slide 18 & 19

The story of the Hero Twins, One Hunahpu and Seven Hunahpu can be found in the Popol Vuh. The excerpt used in this presentation is from the Allen J Christenson translation. Many scholars have translated the Popol Vuh from its original language, this explains why there are so many variations in the narrative. It is also important to note that the Popol Vuh was written after colonial contact but depictions of the story have been present for thousands of years in Maya art.

More About the Slides

Maya Blue

Blue has been found on a large number of pre-Hispanic manuscripts and murals. The rare palygorskite clay is only found in the Yucatán peninsula.

Blue is associated with both the daytime sky and water.

The Color Blue

Slide 27

There was one indigo species which was being processed in Europe prior to the contact was assumed that the Spanish had brought it with them; however, there is prehispanic archeological and ethnographic evidence that contradicts the Spaniards' beliefs. In the cave of La Garrafa, Chiapas, the huipil of a girl was recovered together with a blanket and a shirt, as well as several linens dated to the end of the XV century and the beginning of the XVI. The huipil was dyed blue, with a hue that was consistent with the indigo tone, thus reinforcing the notion of its prehispanic use. (Sax and Lewis 1993; Turok 1996:29).

Yax che' La Ceiba The World Tree

A giant ceiba tree, the sacred tree of the Maya, the yaxche, 'first' or 'green' tree, stands in the exact center of the earth. Its roots penetrate the underworld; its trunk and branches pierce the various layers of the skies. Some Maya groups hold that by its roots their ancestors ascended into the world, and by its trunk and branches the dead climb to the highest sky

More about the Ceiba Tree

Slide 24

"A world tree, which is present in virtually all mythical traditions, connects the underworld (roots) with the sky (branches) and the Earth (trunk). Possibly the most important function that a Mayan ruler could carry out was a ceremony where he assumed the role of the world tree, connecting his people with the gods." **Source:** [FAMSI](#)

This tree is not to be confused or interchanged with the tree of life.

Weaver Ceramic

Slide 6

This ceramic is said to be made of clay with traces of blue paint. It is a female figure with a loom. The ceramic is from México, Campeche, in the Jaina Island. Dating between 650-850 and hosted in the Los Angeles Angeles County Museum of Art.

Calakmul Mural Paintings

Slide 7

This Maya mural was painted in Calakmul, Campeche, México. Details on the murals suggest that it was decorated between A.D. 620-700. Textiles have been part of indigenous attire for a few thousand years.

Diego Rivera Mural

Slide 8

This mural is called the "Pan American Unity", finished in 1940. Rivera painted a group of Olmec artisans at work.

Mural of Bonampak

Slide 17

The mural is found in Chiapas, México. Scholars have proposed that the meaning of the scene was the presentation of the royal heir to the nobility of Bonampak. The mural dates to 790 A.D.

The Hero Twins

Slide 18 & 19

The image above is from the an adapted-illustrated version of the Popol Vuh. Adapted by Victor Montejo, illustrated by Luis Garay and translated by David Unger.

Corn Maidens

Slide 20

'The Painted Murals of San Bartolo" in Guatemala. This image shows the depiction of the Maya Maize God and the creation of the world, surrounding him you can see four kneeling corn maidens.

More About the Images

Fragment of the Mural of the Battle

Slide 27

This fragment shows a warrior of high rank, with one of them vanquished. The murals in Cacaxtla have details typical from Teotihuacan, while the figures possess characteristics of the end of the Mayan Classic period. Although these murals have been dated very early (AD 650-750), the fact that the MB pigment is used indicates that it should come after the ninth or tenth century AD. (Reyes-Valerio, 1993).

COLOURS OF NATURE

FIELD ACTIVITY

NAME:

DATE:

Part 1: Predict

Collect plants, flowers, minerals, or any natural elements that you think you can use to create a dye. Make sure you don't touch unsafe plants, go with with an adult and do your research about safe and unsafe plants around you. Some plants Maya weavers use are:

Element	Color it Makes	Action
Palo Brasil - Brazilwood	Dark Pink	(Boil and let soak for a few days)
Red Utah Sand	Light shades or orange	(Let soak for few days)
Purple Onion Skin	Lilac	(boil and let cool off)
Black Breans	Shades of Blue	(soak the beans and use the leftover water)
Yellow Onion Skin	Green, Yellow & Brown	(Boil and let cool off)
Avocado Seed	Light Pink	(Boil and let cool off, this one ccan be toxic, do no reuse containers or spoons)

YOUR TURN! What other natural elements do you think you can use?
What colors do you think they can make?

Element	Color you predict it will make

Part 2: Experiment

Mix your natural dyes in different containers (ice trays work well, but don't forget to label them) See what happens when you add lime juice, baking powder or salt. It is important that you don't use containers or utensils for eating after you make your dyes. Nature is chemistry, some of the chemicals in the plants can be harmful.

Natural dye only	+ salt	+ baking soda	+ lime/lemon juice	Notes

Natural dye only	+ salt	+ baking soda	+ lime/lemon juice	Notes

Natural dye only	+ salt	+ baking soda	+ lime/lemon juice	Notes

Natural dye only	+ salt	+ baking soda	+ lime/lemon juice	Notes

Natural dye only	+ salt	+ baking soda	+ lime/lemon juice	Notes

Painting with nature. When you're done: draw, paint with your dyes and take notes. Watercolor or card stock paper work well for painting. Have fun!
