

MAGIC TIE

MATERIALS

Woven fabric: 4 inches x 44 inches

Thread

1 Tablespoon AGROSAKE root watering crystals (purchased at a farm supply store)

CUTTING AND SEWING INSTRUCTIONS

1. Cut or tear fabric into a 4-inch X 44-inch piece. Fold fabric right sides together lengthwise, so it is 2 inches X 44 inches long.
2. Using a ¼-inch seam allowance, sew across the short end, pivoting at the corner and up the long side. Backstitch at the beginning and the end.
3. Trim corner and turn the tube inside out; press flat, working out seam while pressing.
4. Measure 15 inches from each end and mark with chalk, pencil, or other fabric marker. On the mark closest to the finished end, sew across the tube several times.
5. Add 1 Tablespoon AGROSOKE to the tube through the open end. Sew across the second mark several times, enclosing the crystals.
6. Fold the open to the inside ½-inch and pin the ends together. Stitch across the open end of the tube to close it.

To activate the crystals, soak in hot or cold water for one hour or longer. The crystals will swell with the water, filling up the enclosed tube. Freeze, refrigerate, or heat until ready to use. As the crystals dry, they will reduce in size. May be immersed repeatedly for repeated use.

OPTIONAL: The ends of the tube can be cut and sewn so they taper instead of square off.
