WINDOW MEASUREMENTS

Select an actual window and measure it for a window treatment. Draw the window and list the measurements.

1. Width of the window:
2. Height of the window:
3. Measurement from window sill to floor:
4. Measurement from the top of the window to the ceiling:
5. Edge of the window to a nearby architectural structure (corner, casement, fireplace):

On separate sheets of paper, sketch two different window treatments for the window you have measured. List the advantages of each.
