

Let's Take a Trip!

Summary

Students will "take a trip" just like Toot, in the story Toot and Puddle.

Background for Teachers

Children need to develop the understanding that maps and globes represent real places and that there are many different environments in the world. One way to begin to make this connection is to have students locate areas on maps and globes and for the students to learn a little about different locations, thus making the places seem "real." In the book *Toot and Puddle* by Holly Hobbie, the character Toot travels around the world for a year while his friend Puddle stays home. In each different country, Toot sends a postcard to Puddle. The reader learns what sorts of activities Toot does in different parts of the world based on the climate. The reader also sees what types of activities Puddle does back home in Woodcock Pocket, Massachusetts. After reading the story, the students will have the opportunity to decide where they would like to travel. Like Toot, they will be writing a postcard home to their friends to tell them about their trip. As teachers, we know that with scaffolding (carefully planned support), a somewhat difficult activity can be accomplished by the students. This increases learning and the value of the activity. We also want to involve students' families in their education. Therefore, part of this activity requires a home/parent involvement. However, it can be adjusted to work using aides in the classroom.

Intended Learning Outcomes

5. Understand and use basic concepts and skills
6. Communicate clearly in oral, artistic, written, and nonverbal skills.

Instructional Procedures

Invitation to Learn

Tell the students that they are going to learn about a pig who loves to travel. They will get to learn a little about all the places that he visits. Ask the students to pay close attention to the types of activities that the pig is doing in each place that he visits and the type of clothing he needs for each area. In the book, the pig's best friend stays home. Tell the students to pay attention to the types of activities that the friend does at home during the year. Before reading, place a sticker on the map and blow-up globe to show where the students are and where Toot and Puddle live (near Boston).

Instructional Procedures

While reading the story *Toot and Puddle*, each time Toot travels to a new country, find it on the map and on the globe and mark it with a sticker. Remember to compare where Puddle is to all the places that Toot visits.

Discuss the weather where Toot and Puddle are and the types of activities that each pig is doing each month in the story. Discuss what types of clothing they are wearing.

After reading the story--if appropriate--ask the students where they have traveled. Find some of the areas on the map and the globe. What did they need to bring on their trip?

Tell the students about a place where you would like to travel. Locate it on the map and the globe. Talk about the types of clothing that you would need to pack based on the weather. Talk about the types of activities that you would like to do there. Or, if possible, talk about a place that you have visited, show pictures, etc.

Show students a prepared copy of the suitcase, clothing, airplane ticket, and postcard (these should match the area that you talked about visiting). Instructions for assembling the suitcase are included in the letter to parents. Show the students how to pack the suitcase and the type of clothing that they would pack if it were a hot or cold area that they want to visit.

Tell students that now they get to go on an (imaginary) trip just like Toot. They will be taking the

blacklines home to work on with their families. They will need to decide where they want to travel to, fill in the airplane ticket, pack their suitcases with the correct type of clothing, and write a postcard to the class about their "trip." In a few days, they will need to bring all their travel papers back to school. Then everyone will get a chance to share their trip with the class. Give each student the parent letter, suitcase blacklines, three sets of Velcro to seal the suitcase, both clothing blacklines, airplane ticket blackline, and postcard blackline.

Pick several days to have the students tell the class about their "trip." As students talk about the places that they "visited," locate each area on the map and the inflatable globe and mark it with a sticker. Students should show their airplane tickets, suitcase with vacation clothing, and read the postcard to the class.

Extensions

If this activity needs to be adjusted for a center or to work with aides/volunteers directly in the classroom, pick several different areas that the children can "visit" (e.g. Disneyland, Hawaii, Paris, etc.) Briefly talk about these areas and the type of clothing the children will need to "pack" in their suitcase. Then let them choose one of the discussed areas to visit and direct their work on the airplane ticket and postcard accordingly.

Graph how many students chose to travel to a warm climate versus how many chose to travel to a cold climate. How many traveled to the same location?

Use a calendar to track where Toot is each month. Talk about what the weather is like each month for Puddle, who stays home.

Use *Google Earth* to locate the places that Toot visits. Also, find your school, the students' homes, etc. Use *Google Earth* any time that your class is learning a new location.

Put travel brochures and blank postcards in the writing center.

Ask a mail carrier to visit the classroom, or take a trip to the post office to see how mail gets from one place to another.

Family Connections

Invite students' family members to the classroom to talk about places they have visited.

Have students ask family members or family friends to send postcards to the class when they go on trips. Remember to mark the locations on the map and the globe.

Collect stamps from mail that students and their families receive and locate the country of origin on a map and globe.

Assessment Plan

Observe students as they present their "trips" in front of the class. Check to see that they have a general understanding of the locations that they "visited." Do the pictures on the postcards match the general climates of the locations? Did they "pack" the correct type of clothing? Do they know the general areas of the world where they took their trips?

Check for the basic understanding that maps and globes represent real places.

Check writings and drawings for developmentally appropriate work.

Bibliography

Research Basis

Bredenkamp, S. & Copple, C., (eds.) (1997) *Developmentally appropriate practices in early childhood programs* (rev. ed). Washington DC: National Association for the Education of Young Children. 22, 99.

A developmentally appropriate classroom is strengthened by the teacher's knowledge of how each individual child learns. In an early childhood classroom, it is necessary for the teacher to learn about each child through a positive relationship with the child's family. A positive, strong, reciprocal

relationship between teacher and family requires "mutual respect, cooperation, shared responsibility and negotiation of conflicts toward achievement of shared goals"(pg 22). Teachers and parents need to work together on a child's education. According to Vygotsky, children need opportunities to work in challenging learning situations where, assisted by adults or peers, they can achieve tasks that would otherwise frustrate them. When given a difficult task and given assistance with positive adult guidance, children are more likely to take initiative and work through the task thus feeling success and acquiring important skills and concepts.

Frazee, B. & Guardia, W. (1994). *Helping your child with maps and globes*. Glenview, IL. GoodYearBooks, Scott Foresman. 155

As quoted from the authors, "As children begin to understand and work with maps, they should also begin to locate places on the globe. Familiar locations can be discussed and located on a map and then compared to the same area on the globe. The teacher should use every opportunity possible to compare and refer to the globe when studying maps because the globe shows the whole earth. Early exposure to the globe is essential because it shows worldwide relationships."

Haury, D. & Milbourne, L. (2000). Helping students with homework in science and math. *ERIC Digest* . Retrieved 11/28/2006. From <http://www.eric.ed.gov>

Teachers need to develop meaningful homework. One benefit of meaningful homework is that it can help students develop mastery of a concept that they have been learning in the classroom.

Homework needs be a good learning experience for students and should be carefully planned by the teacher to have meaning to the students. Parents who help their children with homework naturally become more involved in their child's education and are more aware of what is happening in the school. This in turn can lead to a more positive relationship between teachers and parents.
