Jigsaw Reading and Lesson Design Activity

Summary
Students will research and become experts on a topic. They will then design an effective lesson to teach that topic to other students in the class.

Main Core Tie
Science - Biology
Standard 2 Objective 2

Time Frame
3 class periods of 60 minutes each

Group Size
Small Groups

Materials
- overhead of research topics
  (attached)
- rubrics handout
  (attached)
- student sheet
  (attached)
overhead projector
textbooks
library for reference books/magazines etc,
computers for Internet access (You may choose to use all of these resource materials or only one.)

Background for Teachers
Time needed:
Choose the longer or shorter version of this activity depending on your topics and the amount of time you want to devote. Be mindful during your assessment of the allotted time given students to complete this project.

Safety/Security Concerns: None
Notes to Teacher:
In order to grade fairly and accurately, you will need to be constantly observing and monitoring students during their completion of this activity.

Instructional Procedures
Assemble needed supplies and run off enough copies of the student sheets
Run off a copy of the overhead. The overhead contains suggested research topics. You may want to add from this list or modify it to fit the needs of your class.
Hook: Ask students to describe the best lesson in school they have had. Write down a list of what made the teaching so effective. Tell the students that they will be the teachers and will research and prepare the best lesson they can.
Pass out the student sheets.
Allow students to read through the directions. Answer any questions that they may have.
Divide students into groups of 3-4.
Assign each group to a topic. You may want to do this as a lottery or allow students to sign up for the topic they prefer or you could choose. You may choose to have more than one group researching a topic.
Allow students to research their topics and prepare their presentations. (Be sure to monitor the groups as they design their lessons. Now is the time to assure that the main ideas you want discussed are being covered by the students. If the students are off track help guide them to the more pertinent information.)
Provide time for students to present to other groups. Encourage students to take notes and ask questions during the presentations.
   You may choose to have one group present for the whole class or have several presentation stations. In this version there would be 2-3 groups presenting in different areas of the classroom at the same time. Students who weren't presenting would be at the stations listening.
   Discuss with students how the presentations went and how comfortable they feel with the information.
   Answer any clarifying questions the students may have. You may want to give them a quiz on the topics to assess how well they grasped the information.

Extensions
A possible quiz would be to have the students answer all the research topic questions.

Assessment Plan
Sample Grading Rubric:
See student sheet and "Rubrics" print attached.
